

Twoobii VSAT Installation

TO WHOM IT MAY CONCERN

This document is intended to introduce the VSAT Installation requirements so as to inform the respective Landlord about the scope involved and what equipment is required to be installed at the property.

VSAT Equipment deployed at premises:

- 1.2m diameter VSAT Antenna/Dish (Outdoor) 23 kg
- Wall/Pole Mount Bracket for antenna (Outdoor) 8.5 kg
- 30m Coaxial Cable (distance depending on mounting position)
- Modem (Indoor unit)

Installations may vary to some extent depending on specific site requirements, although standard principles are applied to mount VSAT antenna as illustrated below. The coaxial cable will run from outside the premises from the Antenna (Dish) to the Modem. The modem will be installed inside the building at the designated point. Typically, these two mounting methods are used for deployments:

VSAT extended pole mount

OR

VSAT antenna with wall mount bracket

Regards,
