

Twoobii Surveillance Video of Satellite Information Sheet

Why Twoobii Video?

Twoobii is a leading satellite IP access solution specifically developed for business broadband and access services. Twoobii is the ideal “off-grid” access solution to connect any business location in Southern Africa. Surveillance Video over Satellite forms part of the many Value-Added Services that is designed and optimized to compliment the Twoobii VSAT connectivity solution in order to enhance functionality and satisfy business requirements.

The cloud-based Video Surveillance solution enables remote viewing and two-way voice communication to the remote Twoobii VSAT location. This is done via a Smartphone App accessed anywhere from a data connection globally. The solution is optimized to operate on the Twoobii platform and live streaming uses sub - 256 kbps. The solution is designed for, but not limited to, the following market verticals and applications.

What is Surveillance Video over VSAT?

Asset Management

Access Control

Agriculture / Livestock monitoring

Plant / Base Station maintenance access

Hospitality Industry

Home and Business security

Installation, Configuration and Access

STEP 1

Mount and connect the V380 Camera to your new or existing remote Twoobii Wi-Fi network. The camera has a 360° lens and hence can be mounted horizontally or vertically.

STEP 2

Download the V380 application from the App Store or Google Play. Open the App and select Local install. Add the camera by scanning the camera's QR Code.

STEP 3

Connect to the camera and enable Microphone Access for 2-way Voice communication. Select your desired viewing angle.

STEP 4

Set up the alarm perimeter for triggering alarms. This can also be enabled at predefined time periods.

STEP 5

Set up the notification preferences and connect to the camera from any data connection globally in order to use.
